Vishal Kumar Rao

Senior Java Developer | Java Backend Engineer | Spring Boot | Microservices | Apache Kafka | SQL | AWS

Gurugram, India | +91-7004261579 | vishalbth99@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Senior Java Developer with nearly 4 years of experience in event-driven microservices using Java 17, Spring Boot, Apache Kafka, Hibernate/JPA and SQL on AWS and Azure. Delivered 3 platforms for 10,000+ users; now leading system design and mentoring.

TECHNICAL SKILLS

Languages: Java (17, 11, 8), SQL, Core Java (OOP, Collections, Multithreading, Concurrency, Streams API, Lambdas, Exceptions)

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, JWT, RBAC, Hibernate, Spring Batch, Spring Cache

Architecture: Microservices, Apache Kafka (Producers, Consumers, Topics, Consumer Groups), Event-Driven Architecture, RESTful APIs, System Design, WebSocket, Design Patterns, SOLID Principles, API Versioning

Databases: MySQL, PostgreSQL, Oracle SQL, Redis, Stored Procedures, Indexing, Query Optimization, Schema Design

Cloud and DevOps: AWS (EC2, S3, RDS, IAM, CloudWatch), Azure (App Services, Blob Storage), Docker, Kubernetes, CI/CD

Testing and Tools: JUnit, Mockito, Maven, Git, Swagger, OpenAPI, Postman, JIRA, Agile, Scrum

WORK EXPERIENCE

Senior Software Development Engineer, Truminds Software Systems, Gurugram, India — Apr 2026 - Present

- Lead backend architecture and system design for the Partner Portal and Admin Portal microservices built on Java 17, Spring Boot and Apache Kafka; conduct code reviews and mentor junior developers.
- Define API governance across 6+ modules: coding standards, REST API conventions, API versioning, global exception handling (@ControllerAdvice), Swagger/OpenAPI documentation and JUnit/Mockito test coverage.
- Reduced API response time by ~40% with Redis caching (Spring Cache), SQL indexed views, query tuning and pagination.
- Own production stability of core microservices: AWS CloudWatch monitoring, root-cause analysis and permanent fixes.

Software Development Engineer, Truminds Software Systems, Gurugram, India — Feb 2023 - Apr 2026

- Built 3 production-grade applications (Partner Portal, Admin Portal, PAN-India Mobile App backend) using Java 17, Spring Boot Microservices, RESTful APIs, Spring Data JPA and Hibernate, serving 10,000+ active dealers and distributors.
- Implemented event-driven communication between microservices using Apache Kafka producers, consumers and topics for lead assignment, approval workflow and reward events, with retry and dead-letter topic (DLT) handling.
- Implemented authentication and authorization with Spring Security, JWT, custom security filter chains and Role-Based Access Control (RBAC), securing 5+ business modules across 4 user roles.
- Designed and optimized MySQL and PostgreSQL stored procedures, views and indexes, with native SQL for critical reports.
- Developed a real-time notification system that consumes Kafka events and pushes updates via WebSocket across 3 platforms.
- Built the Coin and Cash Reward System and Spring Batch jobs with Java multithreading (ExecutorService, CompletableFuture) for bulk imports, reward calculations and reports, using Repository, Service Layer and Factory patterns.
- Deployed Dockerized Spring Boot microservices on AWS (EC2, RDS, S3, IAM, CloudWatch) and Azure (App Services, Blob Storage) through CI/CD pipelines in an Agile/Scrum team.

PROJECTS

VoiceAssist AI - Multi-Tenant Customer Support Platform (Java 17, Spring Boot, Spring Security, PostgreSQL, pgvector, Twilio)

- Architected a domain-agnostic support engine for chat, browser voice and phone (Twilio) with a config-driven Intent-to-API registry, so new business domains onboard with no code changes.
- Implemented multi-tenancy with JWT-scoped tenant isolation enforced via Spring Security across queries, sessions and vector search, plus per-tenant RAG on pgvector and LLM-based intent detection.

CodeCadre - Exam and Interview Prep Platform (Java 17, Spring Boot, Spring Security, JWT, Spring Data JPA, PostgreSQL)

- Built and deployed Spring Boot REST APIs serving 21,000+ practice questions to an offline-first PWA, with cross-device progress sync and a JWT-secured, role-based admin console.
- Engineered a content pipeline that parses HTML into JSON and loads it into PostgreSQL, with paginated, lazy-loaded APIs that kept responses fast while content doubled.

EDUCATION

Master of Computer Applications (MCA), National Institute of Technology (NIT) Bhopal - CGPA 8.49/10 — 2020 - 2023

ACHIEVEMENTS

- Promoted from Software Development Engineer to Senior Software Development Engineer (Apr 2026).
- All India Rank 376 in NIMCET among 50,000+ candidates.
- Solved 1,050+ Data Structures and Algorithms problems on LeetCode and GeeksforGeeks.
